

STUBBLE DIGEST

TECHNICAL DATA

PURPOSE:

STUBBLE DIGEST is a natural product for the accelerated decomposition of crop residues and organic debris in farm fields or, for waste in agricultural processing sites.

COMPOSITION:

STUBBLE DIGEST liquid is a combination of naturally occurring bacteria strains, plant enzymes, buffers and surfactants.

DOSAGE:

Apply at the rate of one (1) gallon per four (4) acres, (2.50 liters per Ha.) on soils with a pH between 5.0 and 9.0.

STUBBLE DIGEST is a trademark of Soil Technologies Corp., copyright 1995.

APPLICATION METHOD:

Mix liquid STUBBLE DIGEST with water or liquid fertilizer (minimum 10 gal./acre or 96 liters/Ha.) and spray apply or inject through your irrigation system. The application should be timed to coincide with rainfall or irrigation to ensure contact with soil.

APPLICATION TIMING:

Applications should be made when temperatures are between 50°-90°F (10°-32°C). Allow 48 hours between STUBBLE DIGEST applications and the use of herbicides, fungicides, and insecticides.
