

*Liquid Aeration*TM Spray Program

This easy-to-use spray program is an effective method for transforming the rhizosphere on lawns and sport fields. A *Liquid Aeration* Spray Program provides a simple replacement for expensive mechanical aeration. Treated turfs perform better, require less water and nutrients, and show improved plant health.

The *Liquid Aeration* program increases turf rooting, improves soil fertility, reduces watering requirements, and improves turf disease and pest resistance.

Applications of the *Liquid Aeration* program transform treated soils, and the result is healthy, vigorous grasses that cost less to maintain. The *Liquid Aeration* program delivers cost savings and predictable results in every situation and on every variety of turfgrass.

*Liquid Aeration*TM Spray Program* Thatch Relief + Oasys Ultra**

Application Schedule- One gal./acre of Each Product

SPRAY DATE	NORTHERN ZONE	TRANSITION ZONE	SOUTHERN ZONE
March/April		X	X
April/May	X		
June			
July			
August			
September/October	X		X
October/November		X	X
YEAR TOTAL	2 gal./acre each	2 gal./acre each	3 gal./acre each

Note: The *Liquid Aeration* program does not need to be watered in immediately after application. Rainfall or irrigation will be adequate to activate the process.

*The *Liquid Aeration* Spray Program is a supplemental nutrient program, to be utilized with adequate fertilizer, based on soil-test recommendations.

**For very compacted soils, or hard clay soils, use Oasys Ultra at 2 gal./acre rate.
