

MEGA-MB

PURPOSE STATEMENT:

MEGA-MB™ is a microbial inoculant intended to improve soil biology. With improved biology in the soil-plant environment, growing plants may display enhanced vigor, vitality and resistance to disease.

MEGA-MB is a microbial product for agronomic benefit in crop production. It contains *Metarhizium anisopliae* and *Beauveria bassiana* in combination at the following rate: 2×10^8 CFU/gram. These microbes can be found naturally in healthy soils. Through competitive colonization, these microbes make the environment inhospitable for invasive organisms. They colonize the root rhizosphere and crop environment, increasing the beneficial fungal population in this area as compared to the surrounding environment.

Carrier: Calcium carbonate

CROPS:

Cereals, legumes, vegetables, fruit crops, cole crops, orchards, fiber crops, cut flowers, ornamental in greenhouses, nurseries, turf grass, lawns, and landscape.

DIRECTIONS FOR USE:

MEGA-MB is to be combined with water, sprayed onto the soil and plant surface. It may also then be watered in or incorporated by light, shallow tillage, as may be appropriate.

APPLICATION RATE:

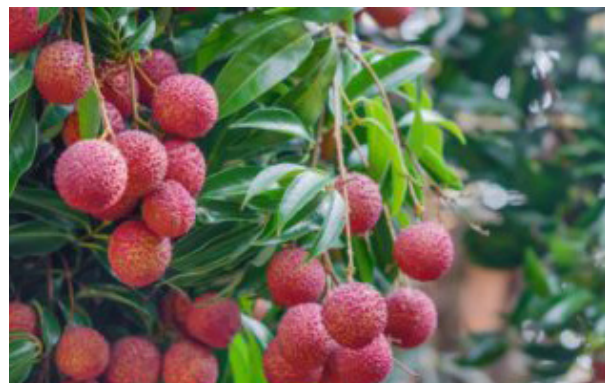

1-2 lbs/acre

APPLICATION TIMING:

10 days prior to planting and repeated during the growing season.

STORAGE:

Mega-MB should be stored in a cool, dark place.
