

MILKY SPORE

Kills Japanese Beetle Grubs

Milky Spore is the safest material ever developed for control of Japanese Beetles. It is not a chemical pesticide. It is a safe simple spore affecting some 47 different varieties of white beetle grubs found in the United States including June Beetle or May Beetle grubs.

ONLY ONE TREATMENT IS NECESSARY

Milky Spores are remarkably resistant to adverse weather conditions and remain viable in the soil for many years. Normal spread of the spores takes place as each infected larva dies, decomposes and releases billions of new spores into the soil. Time must be allowed for this process to effectively saturate a treated area, but only one application is required and the spores continue to multiply on their own, season after season, as long as larvae are present. Once the beetle larvae are completely destroyed, the spores remain dormant in the soil for years waiting to go to work again as soon as new larvae appear.

MILKY SPORE IS HARDY

Milky Spore is compatible with fungicides, fertilizers, pesticides, and other lawn chemicals. The spore is not known to be affected by these materials, and, may in fact, be applied to the soil at the same time. Apply anytime the ground is not frozen, Spring, Summer, or Fall.

Adult Japanese Beetles lay eggs in open grassy areas. The eggs hatch into grubs which eat the roots of the grass during the growing season, and can cause extensive bare spots. Grubs grow into beetles which destroy foliage, fruit, and flowers.

Japanese beetles feed on more than 275 different plants, shrubs and trees and ornamentals each year. Their rampant destruction is best prevented by attacking the larva, which is the weakest link in the life cycle of the beetle.

READY TO USE, NO MIXING

Apply one level teaspoonful of Milky Spore powder in a concentrated spot every four feet in rows four feet wide creating a checker board pattern throughout open grassy areas, flower beds and vegetable gardens.

ACTIVE INGREDIENTS:

Spores of *Bacillus Popilliae*.....0.02%

INERT INGREDIENTS:

Diluents99.98%
Total.....100.00%

Safe for the environment, Milky Spore is a simple, natural spore that is harmless to fish, birds, bees, pets, animals, plants or man.

40 Ounce Box
Treats 10,000 sq. ft.

10 Ounce Box
Treats 2,500 sq. ft.
