

REDUCTION IN THE SURVIVAL OF WEEDS TREATED WITH CORN GLUTEN MEAL

Barbara R. Bingaman and Nick E. Christians
Dept of Horticulture, Iowa State University

LEGEND:

A-Annual Bluegrass	I-Dandelion
B-Black Medic	J-Giant Foxtail
C-Black Nightshade	K-Large Crabgrass
D-Buckhorn Plantain	L- Orchardgrass
E-Catchweed Bedstraw	M-Purslane
F-Common Lambsquarters	N-Redroot Pigweed
G- Creeping Bentgrass	O-Shattercane
H-Curly Dock	P-Smooth Crabgrass
	Q-Yellow Foxtail

1. These data are the mean percentages of the plant survival reductions as compared with the survival of the control plants. This study was done under greenhouse conditions.
2. These reductions are the means for surface applied and preplant incorporated treatments (N-12)
